Talents - TEAM Example

6 People

Distribution of Talents (results > 60)

Intensities

Validation	: 87	Study	: 23
Operations	: 80	Projects	: 20
Planning	: 78	Invention	: 19
Support	: 53	Service	: 0

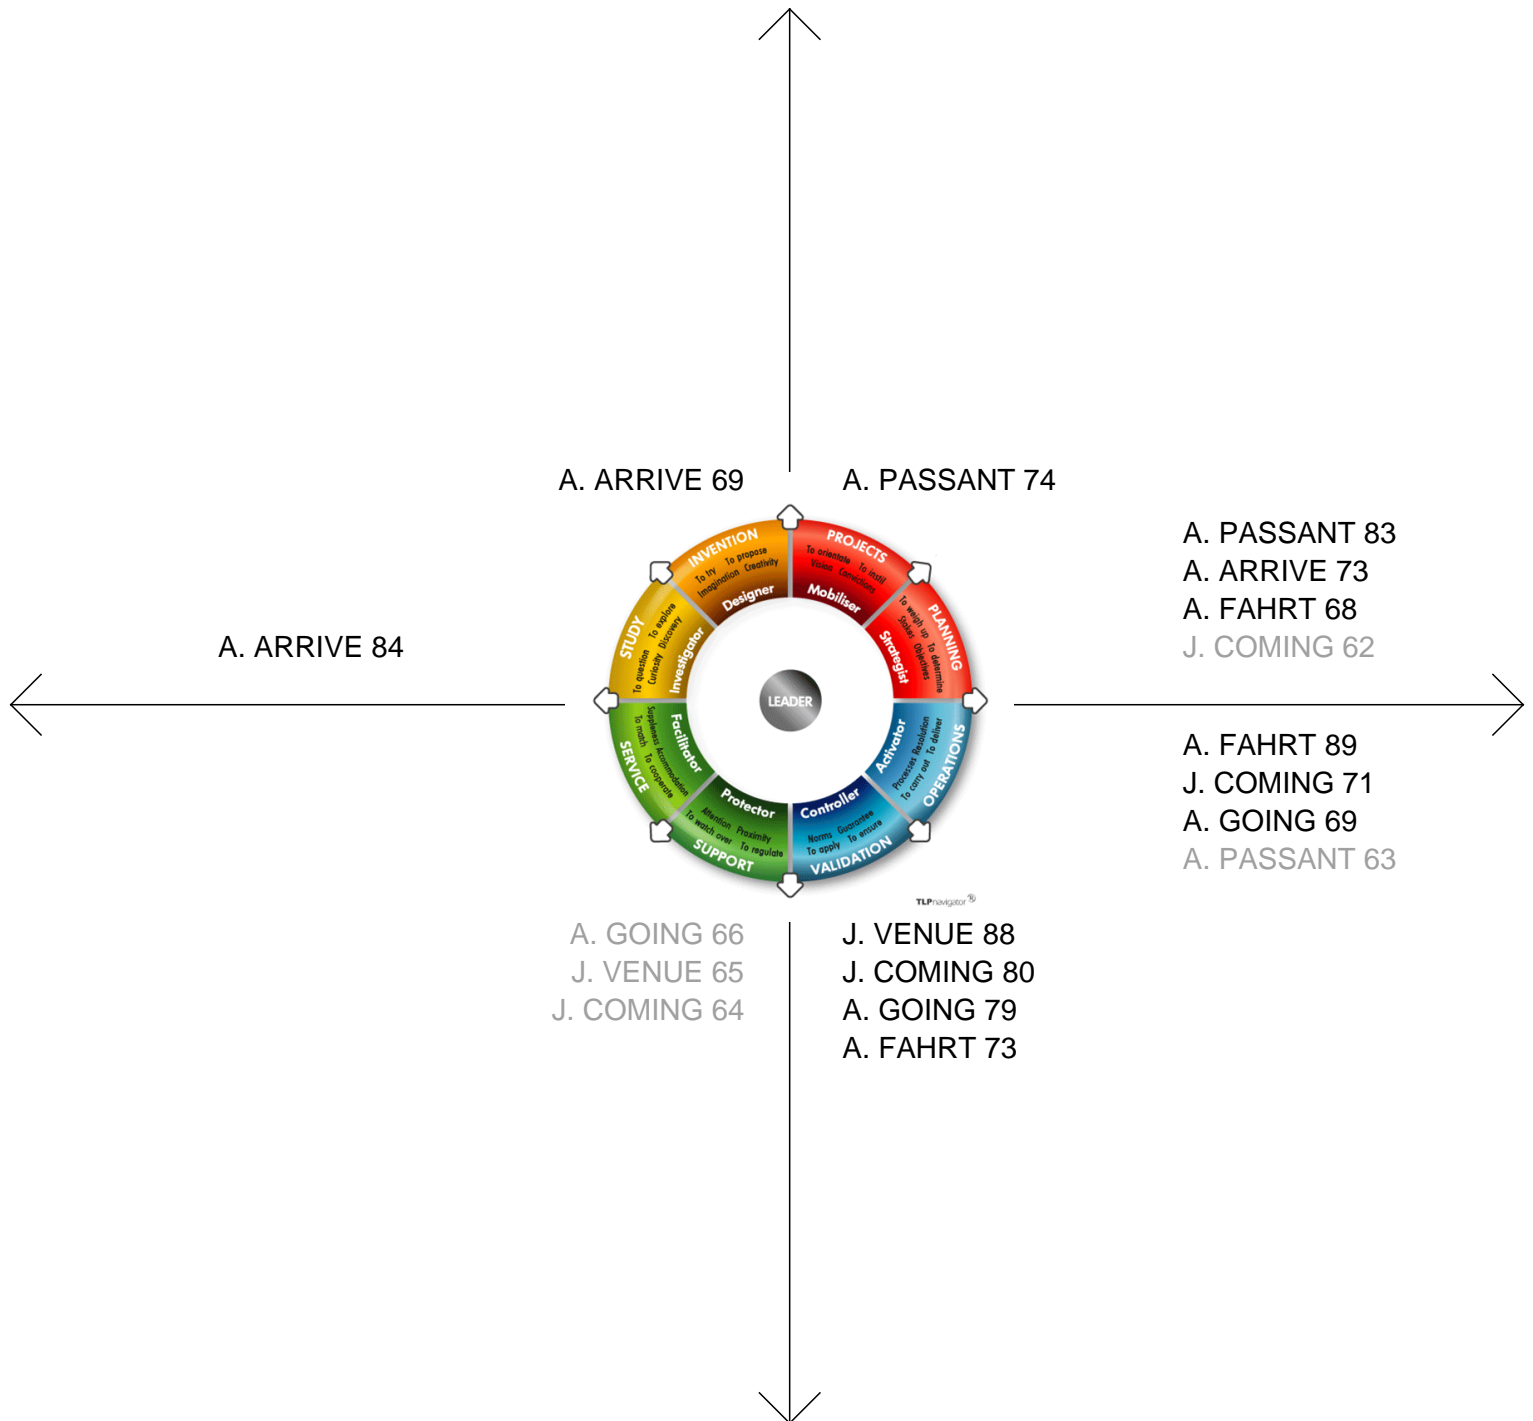

Intensity = Sum of Team Talents > 60 / Nb. of crew x 60

Statistical data

Averages of the team

The averages represent the dominant trend - or central position - of team members on each axis.

Standard deviation

The standard deviation measures the greater or lesser dispersion of results around their average. A standard deviation of 0 would indicate that all team members have the same result. A standard deviation of 50 indicates that the results are divided in equal proportion to the two ends of the scale.

A standard deviation > 15 is considered as a sign of diversity within the team .

Medium consistency indices (MCI)

From 0.7 results are considered as consistent.

	Dominants	Averages	Standard deviation	MCI
Modality of Relationship :	Introversion	56	15	0.85
Modality of Perception :	Experience	51	12	0.9
Modality of Decision :	Reasoning	62	16	0.82
Modality of Action :	Structure	61	11	0.82

Medians

The median is the value which separates the participants into two groups of equal size. The median is less sensitive to outliers than the average.

		Medians
Modality of Relationship :	Introversion	58
Modality of Perception :	Experience	60
Modality of Decision :	Reasoning	60.5
Modality of Action :	Structure	61.5
